

# Splay Tree Diagrams

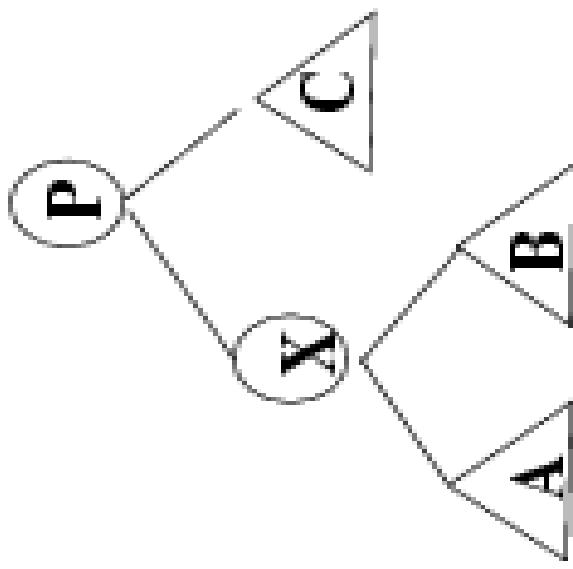

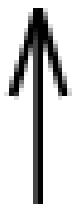

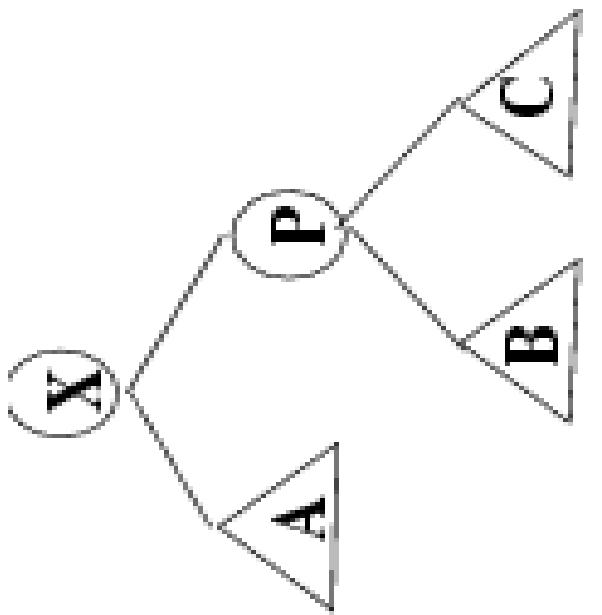

CMSC 341

# Bottom-Up Splaying

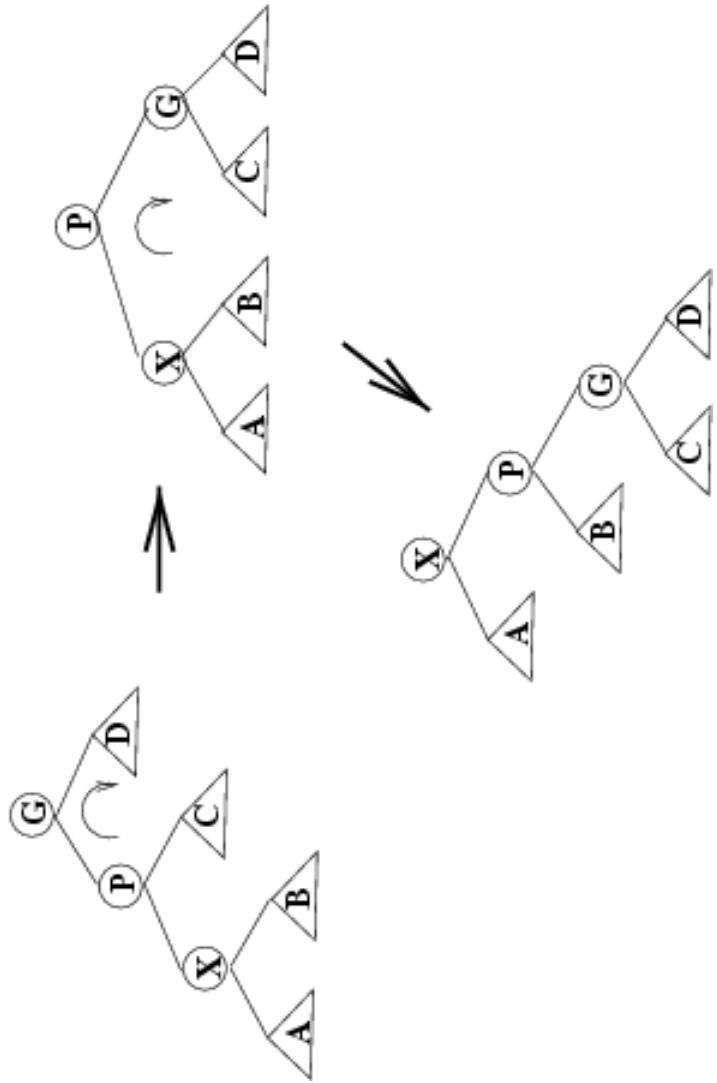

These diagrams show the rotations necessary for “Bottom-Up” splaying.

Note that these diagrams illustrate the rotations necessary whenever the node to be splayed is a left child. Symmetric rotations are performed when the node is a right child.

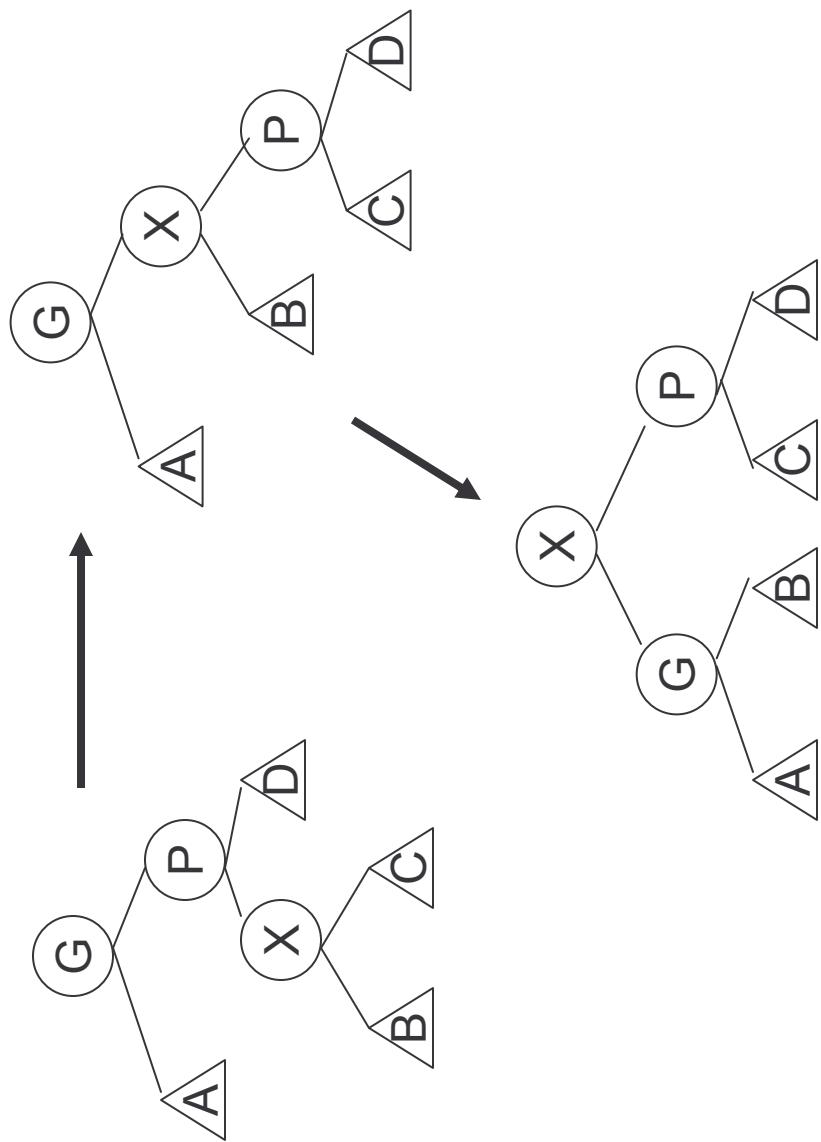

# Bottom-Up Single Rotation

# Bottom-Up Zig-Zig

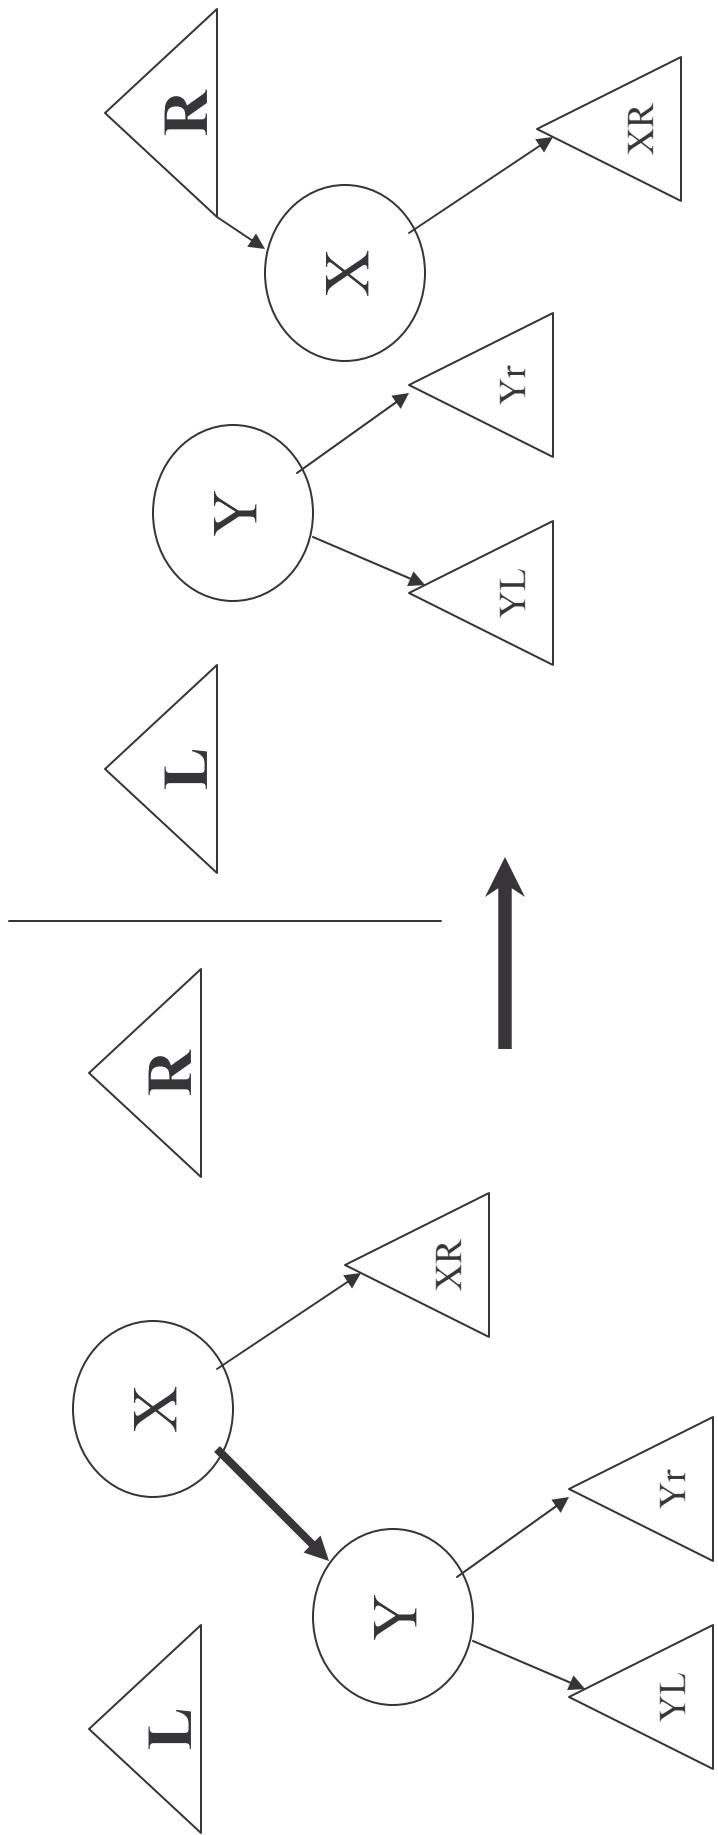

# Bottom-Up Zig-Zag

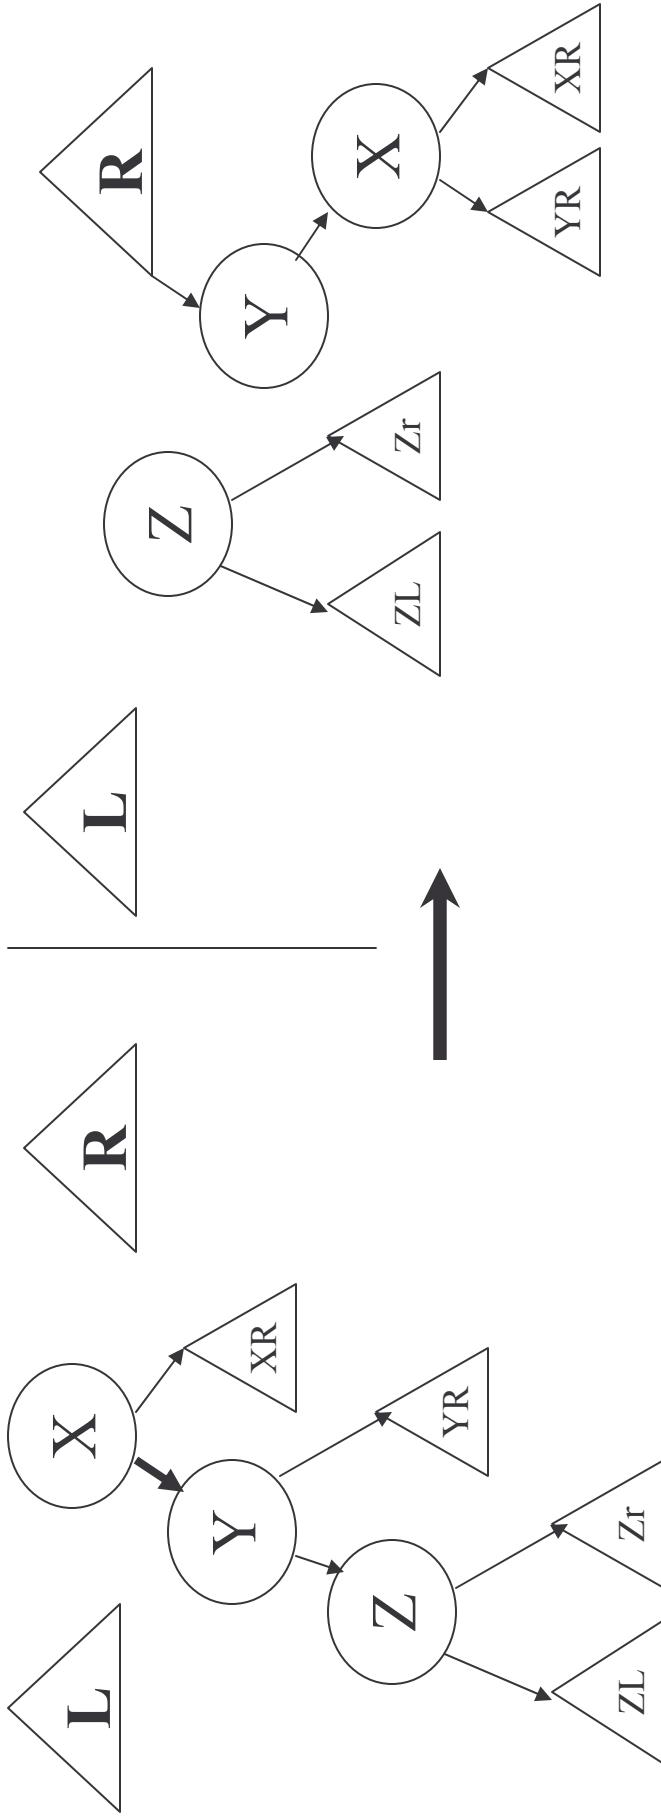

# Top-Down Splaying

These diagrams illustrate the reorganization of the splay tree as we follow the left-link from a node. Note that symmetric reorganization of the tree occurs when the right-link is followed.

# Top-Down zig

# Top-Down Zig-Zig

# Top-Down Zig-Zag
